STONE CROP

This succulent is known to survive in climates that are dry and typically not conducive to growing plants. Because of this, naturally, skin care companies have been experimenting with sunscreen ingredient combinations that include this plant. Stone crop's antioxidant properties protect the skin from pollutants. When applied topically, it regenerates skin cells, lightens dark spots, and moisturizes dry skin.

SODIUM PCA

One of the main ways to combat skin damage is keeping the skin (and body) hydrated. So, many sunscreens contain humectants to draw moisture from the air into the skin. One common humectant used in sunscreens is sodium PCA. In addition to this, there are typically occlusive ingredients to seal in the moisture and others to act as a barrier against damage.

GINGER

This root has many health benefits. When used as an extract, one of the many benefits is its soothing and antioxidant power. When applied topically, this extract provides protection to the skin's matrix from UVA and UVB rays. Ginger prompts the production of thiorodoxin-1, which is an antioxidant protein and redox that wards off skin damage due to harmful ultraviolet rays.

ZINC OXIDE

One of the most common sunscreen ingredients, zinc oxide is highly effective in preventing skin damage from UVA and UVB rays. In fact, it is often used in sunscreens, cosmetics, and moisturizers because it minimizes the risk of skin cancer while absorbing the ultraviolet rays. Zinc oxide is created through a chemical heating process of zinc, which is combined with oxygen molecules. What is left after the process is a fine, white, crystalized powder that provides a protective layer for the skin.

Glo Skin Beauty

Protect skin from harmful UVA and UVB rays with Glo Skin Beauty's new **Daily Mineral Defense Broad Spectrum Sunscreen SPF 30**. Infused with oleosome technology and sodium PCA, which helps skin maintain and prolong hydration levels, this weightless, mineral formula is ideal for dry skin types looking for sun shielding protection without any residue or chalkiness. 800-232-0398 or gloskinbeauty.com
